# SAFETY DATA SHEET

Data source summary: generated from real data or fixed text

This is the short version of the SDS Data Source Map. It follows the layout of a generated Safety Data Sheet and gives every field one of two tags:

- **GENERATED FROM REAL DATA** The content comes from real data: the product's formula and raw materials, hazard data and determinations, the regulatory lists, the product family, the company or manufacturer record, the publish record, or text entered for that product. Standard wording that only prints, or changes, because of that data counts here too.
- **USES FIXED TEXT** The same words print on every sheet, whatever the data: headings, labels and constant statements.

Only what prints on the sheet is listed. Warnings shown to the operator in the preview are left out. The full map (SDS-Data-Source-Map-2026-10-12.pdf) shows where each value comes from, what has to be kept up to date, and what prints when it is missing.
